Title : On the Determination of Spoilage in Frozen Fish.

Orig Pub: Ceskoslov Hyg, 3, No 2-3, 191-193 (1958) (in Czech  
with English and Russian summaries)

Abstract: The determination of the amount of  $\text{NH}_3$  (according  
to Conway) [spelling uncertain] in frozen fish  
fillets is generally recognized to be the most  
sensitive method for the detection of the initial  
stage of spoilage, being more sensitive than even  
the organoleptic determination. The colorimetric  
determination of amino acids (Dokovska test), the

3006. SVOBODA J., and SVOBODOVÁ L. Gottwaldova St. Lečebna pro Děti v Luži-Košumberku. \*Dôležitost včasné diagnostiky a terapie u dětské kostní a kloubní tuberkulosy. The importance of prompt treatment in bone and joint tb of children ROZHL. TUBERK. 1956, 16/3  
Tables 2 Illus. 10

Bone and joint tb in children is diagnosed late. From the total of 1,315 children 308, i.e. 23.4% were admitted into a sanatorium in the first 6 months; up to one year 308 children, i.e. 23.4% and later than after one year 699 children, i.e. 53.2%. The main cause of delay is late and uncorrect diagnosis. This fact is very important especially today because with promptly instituted, tuberculostatic therapy the anatomic and functional results are better. Vojtek - Sumperk (XV, 7,9)

TITLE: Quantitative determination of monazite and zircon in Otava sands by spectrochemical methods

PERIODICAL: Referativnyy zhurnal, Khimiya, no.11, 1962, 149,  
abstract 11 D143. (In the Collection: Ústřed. ústavu  
geol. Odd. geol., v.26, 1959 (1961), 87-118).  
(Czech, abstracts in English and Russian).

TEXT: A spectrochemical method was developed for the determination of monazite and zircon in the sands and alluvial deposits on the basis of determining the bond between Ce, La and Zr, and certain minerals. Results are given of optical, X-ray and qualitative spectral investigations of sand concentrates from the river Otava (more than 140 samples) and also calibration graphs for the determination of Ce, La and Zr contents. Detailed description is given of the sample preparation for analysis, preparation of standard solutions with the concentration range of 5-0.0005%, conditions for the recording and analysis of the spectra.

TITLE: A method for the automatic recording of defects in materials.

CZ Pat. No. PV 3200-64

SOURCE: Vynalezy, no. 10, 1965, 19

TOPIC TAGS: ultrasonic flaw detector, flaw detection

ABSTRACT: A method is described for the automatic recording of defects in materials. The defects are detected by an ultra-sound device distinguished by the feature that the defects in the material detected by the ultrasonic probe of a detectoscope act upon the recorder, which traces a topographic record in rectangular coordinates. The reflected ultrasound is converted to electrical pulses in such a way that the movement of the recorder is disturbed or interrupted and synchronized with the forward movement of the conveyer in one direction. At the same time the movement of the recording drum is mechanically synchronized with the reverse movement of the carrier in the reverse direction which is perpendicular to the first movement.

Title : Combating Contagious Diseases of Bees

Orig Pub : Mezhdunar. s.-kh., 1957, No 4, 88-97

Abstract : In Czechoslovakia, sacculated broods, the American foul brood and espergillosis are encountered very rarely. When attempting to control American foul brood, colonies are fumigated with sulphur and then burned together with the beehive and empty honeycombs. In combating nosematosis, which is the most widely spread disease, fumagillin /a fungicide/ is successfully used. Amebiasis is never encountered. It was noted that when bees

Title : Apiculture in Czechoslovakia (Pchelovodstvo v Chechoslovakii)

Orig Pub: Pchelovodstvo, 1957, No 5, 57-59

Abstract: Attention has long been paid to apiculture in Czechoslovakia. Since 1866, a special magazine has been published on apiculture. In 1922, in Dole, on the shores of the Vltava, the Central Institute of Apiculture was organized. This Institute has several stations. In Slovakia (in Liptovskiy Gradok) a second Apiarian Institute is located. The chief source of honey is accacia (the bees gather from it 40-80 kg. of honey per bee family). Other sources

Title : The Vitamin Content of Honey

Orig Pub : Vcelarstvi, 1957, 10, No 3, 42

Abstract : Analytical data are reported on the vitamin content of honey, pollen and queen jelly; the latter has a content of vitamins that exceeds that of honey by approximately 100 times. The extensive therapeutic value of honey is pointed out, and also the fact that honey retains its therapeutic properties and vitamin content if it is not heated above 50°.
